THINKING, FAST AND SLOW

Daniel Kahneman | Sample PDF document for the Digital Library demo

---

Overview

This sample PDF summarizes two ways of thinking described in the book: System 1 operates quickly and intuitively, while System 2 is slower, deliberate and analytical.

Key ideas

1. Anchoring - the first number we see influences our judgement.
2. Loss aversion - losses feel stronger than equivalent gains.
3. Availability heuristic - vivid events feel more likely.
4. Overconfidence - we trust our intuition more than we should.

Application for library readers

When choosing a book, readers may rely on covers, titles or recent recommendations. A search tool with multiple strategies helps readers make decisions based on relevant criteria instead of first impressions.
